### Faulty Products Put Patients at Risk

## Some Popular Medical Devices Escape FDA Scrutiny

Countless patients around the world depend on advanced medical devices to improve their quality of life. As the \$110 billion medical device industry cranks out thousands of products every year, eye-opening reports continue to surface detailing faulty devices, repeat surgeries and massive recalls. The FDA argues patients need access to life-saving devices quickly. However, a speedy approval process means some risky devices are cleared without clinical testing, and once on the market receive limited oversight. *You should know* the risks and realities of medical devices before one is put in your body. **Fatally flawed approvals. >>>**

**Arthroplasty, the reconstruction or replacement of a joint, as shown here in this hip x-ray, is big business for aging baby boomers.**

## BY THE NUMBERS /

**\$133  
Billion**

The size of the United States medical device market is expected to surpass **\$133 billion** by 2016. At \$110 billion, it is currently the largest medical device market in the world.

**71%  
Failed**

A **2011 study** found that 71 percent of Class I medical device recalls (those deemed most likely to cause serious adverse outcomes or death) were cleared through the FDA's 510(k) fast-track approval process.

# 1,190 Recalls

According to a [recent FDA report](#), recalls of defective medical devices nearly doubled from 2003 through 2012: 1,190 in 2012 compared with 604 in 2003.

## BOOKMARK FAVORITES /

### Routine Surgical Device May Spread Cancer

Many surgeons use a device called a morcellator as a way to do noninvasive hysterectomy surgery. Amy Reed, a doctor herself, says the morcellator used in her 2013 hysterectomy spread cancer all over her stomach. [View video.](#)

### Large Portion of FDA-Approved Devices Lack Safety Evidence

A recent study from the *Wall Street Journal* shows the majority of moderate- to high-risk medical devices approved by the FDA lack scientific evidence to verify safety and effectiveness with patients. [View video.](#)

### FDA Knew Device Might Expose Patients to Deadly 'Superbug'

Experts say the FDA has known since at least 2009 that the medical devices involved in a superbug outbreak that infected 179 patients in Los Angeles could transmit lethal infections but did not require more stringent safety standards. [View video.](#)
